RESULTS

- Enhanced infection control
- Quicker *TransferPad* turn-around between patients
- Optimized capital investment in lateral patient transfer equipment
- Reduced laundering of *TransferPads*
- Extended *TransferPad* service life

Sani-Liner™

TransferPad Covers

AirPal Sani-Liners are a very useful accessory to AirPal's line of *TransferPads* for the purposes of enhanced infection control and optimization of the AirPal lateral transfer system.

Made of the same advanced medical fabrics as AirPal *TransferPads*, Sani-Liners are easy to clean and launder. Available in Reusable and Disposable versions for all *TransferPad* sizes, Sani-Liners have been designed with an extended length/width feature to fully cover the *TransferPad* when inflated. This provides better infection control than competitive designs.

Enhanced Infection Control!

Sani-Liners are easily attached to AirPal *TransferPads* with non-ferrous snaps. This method of attachment offers enhanced infection control over Velcro® based systems. Similar to *TransferPads*, the snaps are compatible with MRI environments and the Sani-Liners are radiolucent.

Optimized *TransferPad* Deployment!

AirPal Sani-Liners provide a quicker *TransferPad* "turn around" between patients, a reduced inventory of *TransferPads* in the cleaning cycle, reduced laundering costs, and an extended *TransferPad* service life. Simply stated, AirPal Sani-Liners will help your facility optimize the deployment and use of the AirPal lateral patient transfer system.

Why not call AirPal today for our extremely cost effective Sani-Liner pricing?
