

BRIDGEAIR™ REUSABLE AIR TRANSFER & REPOSITIONING MATTRESS

An efficient lateral transfer solution

The **BridgeAir™ Reusable Air Transfer & Repositioning Mattress** is built to last! It is made from a durable material that can be wiped down in between patient use with most hospital approved disinfectant spray & wipes (i.e. Oxivir, Cavicide, Centurt) or machine wash according to manufacturer guidelines. Its construction is designed to outlast other air transfer mattress systems on the market while always maintaining its functionality.

The combination of the BridgeAir Supply and Reusable Mattress can reduce the patient weight to transfer by over 80%-90% when performing the a lateral transfer or repositioning task.

When left underneath the patient to increase utilization, tests have shown minimal increase in mm HG on the skin; as little as <1% increase. It is always recommended to consult your wound care team before leaving the mattress underneath your patients.

If you're looking for a quality product to assist in decreasing staff injuries at a price that fits your budget, the BridgeAir will exceed your expectations.
